                                                                                                       kidney
                                                                                                       disease
```

diagnosing cat kidney disease.

Claim 6; SEQ ID NO 3; 33pp; Japanese.

The present sequence encodes a cat cauxin protein (I) or its salt, which CC is cat kidney disease marker. Also described: (I) a partial peptide (II) CC of (I); (2) a nucleic acid (II) encoding (I) or (II); (3) a vector (IV) CC comprising (III); (4) a transformed host (V) comprising (III) or (IV); (C comprising (III); (1) a transformed host (V) comprising (III) or (IV); (C comprising (I) or (II) by culturing (V); (6) a antibody (VI) which CC couples specifically with (I) or (II); (7) diagnosing cat kidney disease CC which involves measuring (I) quantitatively, and where reduction of CC amount of (I) indicates presence of the disease; (8) a cat kidney disease CC diagnostic agent comprising (I) labelling agent, a reagent which measures CC the biological activity of urinary (I) or (VI); and (9) a cauxin CC cat kidney disease marker and (VI) is useful for diagnosing cat kidney CC disease marker semant which measures simple. (I) is useful as a CC cat kidney disease marker and (VI) is useful for diagnosing cat kidney complicated diagnostic methods such as X-ray imaging, ultrasonic imaging, CC complicated diagnostic methods such as X-ray imaging, ultrasonic imaging, blood testing.

They are also used to stimulate the immune system, and to increase, in culture, the production of associated cTL, for reinjection, and/or to induce secretion of cytotoxic factors from CTL. Dendritic cells loaded with iCE are used to induce such CTL in cultures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 1680 BP; 345 A; 475 C; 488 G; 372 T; 0 U; 0 Other;

Sequence 1, Application US/10023515

Publication No. US20020182636A1

GENERAL INFORMATION:
APPLICANT: CURLES, ROTY A. J.
APPLICANT: SILOS-Santiago, Inmaculada
TITLE OF INVENTION: 53010, A NOVEL HUMAN CARBOXYLESTERASE
TITLE OF INVENTION: FAMILY MEMBER AND USES THEREOF
CURRENT FILING DATE: 2000-12-18
PRIOR APPLICATION NUMBER: 60/256,369
PRIOR FILING DATE: 2000-12-18
PRIOR APPLICATION NUMBER: 60/256,369
PRIOR FILING DATE: 2001-03-28
NUMBER OF SEQ ID NOS: 6
SOFTWARE: FASESEQ for Windows Version 4.0
SEQ ID NO 1
LENGTH: 2158
TYPE: DNA
ORGANIGM: Homo sapiens
FEATURE:
NAME/KEY: CDS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC protein containing the structural characteristics of a carboxylesterase CC family member. The invention provides $3010 nucleic acids, antisense CC molecules, expression vectors, host cells, transgenic animals, $3010 CC proteins, fusion proteins, antigenic peptides, anti-$3010 animals, $3010 CC proteins, fusion proteins, antigenic peptides, anti-$3010 animals, $3010 CC proteins, fusion proteins, antigenic peptides, anti-$3010 animals, $3010 CC proteins, for detecting the presence of $3010 polypeptides or nucleic acids, of identifying a compound that binds to the $3010 polypeptide, and CC controlling disorders involved abstrant or deficient hydrolysis of CC controlling disorders involving abstrant or deficient hydrolysis of CC carboxylic esters. As $3010 mRNA is highly expressed in the central and CC pain models, $3010 molecules controlling neurological disorders and therapeutic agents for controlling neurological disorders, such as pain-
CC cespecially a pain-related disorder) characterised by abstrant activity of a $3010 expressing cell involves administering a compound that
CC modulates $3010 activity or expression

                                                                                                                                        Ś
                                                                                                                                                                                                                                    The present invention describes the use of polypeptides related to C urological disorders for identifying a compound capable of treating a C urological disorder, identifying a subject having a urological disorder, or treating a subject having a urological disorder. Also described: (1) a CC method for identifying a compound capable of treating a urological CC disorder; (2) a method for identifying a subject having a urological CC disorder; and (3) a method for treating a subject having a urological CC disorder; The compound has uropathic and cytostatic activities. The CC polypeptides related to urological disorders are useful for identifying a CC compound capable of treating a urological disorder, identifying a urological disorder, or treating a subject having a urological disorder. Disorders include urinary incontinence and benign prostatic disorder. Disorders include urinary incontinence and benign prostatic charing aurological disorder related protein, which is used in the exemplification of the present cc invention.

The invention relates to an isolated polypeptide with signal sequences CC which allow it to be secreted extracellularly or membrane associated. The CC extostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, notropic, curotatic, vulnerary, antiarteriosclerotic, antiparkinsonian, notropic, cardiant, antilicer, virucide, antityroid, cerebroprotective, anorectic, CC end metabolic. Polypeptides and polynucleotides of the invention are CC useful in the treatment, or as a vaccine in the prevention of, cancer, CC wound healing disorders, infection, atherosclerosis, Parkinson's disease and Alzheimer's disease, autoimmune disorder, haematopoietic disorder, inflammation, neoplastic diseases, nervous system related disorders and CC hyperproliferation, systemic autoimmune disease, hyper-immunity, CC developmental abnormality, gastrointestinal ulceration, neuropathy, cancers etc. Alzenderoscial diseases, metabolic diseases, sperm dysfunction, thyroid disorders e.g. hypothyroidism, brain damages, colitis, cone phototransduction deficiency, neurological diseases, stroke, angiogenesis, CC ovulation disorders, diseases in the spinal cord, thyroid gland, heart, CC transduction deficiency, neurological diseases, stroke, angiogenesis, CC ovulation disorders, and alleviation of precocious puberty. The CC growth abnormalities, and alleviation of precocious puberty. The cc growth abnormalities, and alleviation of precocious puberty. The cc growth abnormality in records ABP60965-ABP61019 represent novel human

CC are selected from autoinmune/inflammatory disorder such as acquired curvatures, such as acquired conventis; a cell proliferative disorder such as arteriosclerosis, psoriasis, coll proliferative disorder such as arteriosclerosis, psoriasis, collectives, hepatitis, and cancer; a neurological disorder such as acteriosclerosis, and cancer; a neurological disorder such as collectives, and cancer; a neurological disorder such as collectives, epilepsy, collectives, and cancer; a neurological disorder such as conjunctivitis, glaucoma, parkinson's disease; collectives, and evelopmental disorder such as adenoma, thrombosis and infections collectives, and eye disorder such as conjunctivitis, glaucoma, cataract; metabolic collectives, and eye disorder such as cystic fibrosis, diabetes and goitre; a gastrointestinal collectives as anoraxia, peptic ulcer; and liver disorders. DME is consolid to a number of drug screening techniques and to analyse the consolid collective or cell type. The invention is useful for creating collective in somatic or germline gene therapy, to generate a transcript image of a classue or cell type, for detecting differences in the chromosomal collective discorders in the chromosomal collective discorders in the chromosomal collective discorders, and as hybridisation probes for mapping naturally occurring genomic sequences. The present sequence is human DME-10
  Sequence 642
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated human drug metabolising enand its nucleotide. DME is useful for diagnosing, treating or published associated with aberrant expression of DME, where the are selected from a trivial discreases are selected from the contraction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 65; Page 155-156; 169pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel human drug metabolizing polypeptide, useful in diagnosis, prevention or treatment of autoimmune/inflammatory, cell proliferative, neurological, developmental, endocrine, metabolic and gastrointestinal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2002-519668/55

                                                CC The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorders, condition for the proliferative disorders, conditions caused by virus, bacteria, fungion parasite. The dithp CC disorder, neurological disorders, gastrointestinal disorders, or CC infections caused by virus, bacteria, fungion parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide CC polymorphisms, as molecular weight maxiers, and for somatic or germline CC gene therapy. The present sequence represents a dithp protein of the CC invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly forms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Schmidt JP, Wright RJ, Bruns CM, Marjanovic MM, Shen F; Harthshorne TA, Suchorolski MT, Altus CM, Pitts SJ, Elder LV, Mooney EM, Delegeane AM, Panesar IS, Banville SC, Reddy TP; Stevens KA, Blanchard JL, Panzer SR, Wang X, Au AP, Gerstin Peralta CH, Anderson SB, Rioux P, Shen EJ, Wu MC, Stuve LL; Lagace RE, Spiro PA, Stewart EA, Wingrove J, Vitt UA, Kirtor Xu Y, Kwong M, Policky JL, Hurwitz BL, Ma Y, Jackson JL, Gj Patury S, Shi X, Suarez CJ;
